

Product Design & Technology

MINI PROJECT 2025

'The school bag of the future'.

In 2040 the way students learn and what they will bring with them to school, may change dramatically.

Think about what these changes could be (in technology, society, transport, food, ways of teaching and learning, equipment). Consider what students will now need throughout the day (reading and writing methods, food/ nutrition, equipment for after school activities.....).

Design the 'school bag' for 2040.

Be as creative and varied in your solutions as you can (aim for at least 5 different ideas). Use sketches, models, images (etc.) to communicate your innovative ideas.
