Welcome

Welcome to the Early Careers Employer Survey 2023

The University of Limerick conducted this survey to provide an annual overview of graduate recruitment in Ireland. The survey participants are employers who hired graduates or offered placements in 2022/23. They represent a diverse range of organisations, including local, national and global companies, multinationals and SMEs, and not-for-profits, from various sectors and disciplines. Three hundred and forty employers responded to the survey this year. The survey took place between April and May 2023. The feedback from the organisations helps us to prepare our graduates for their future careers.

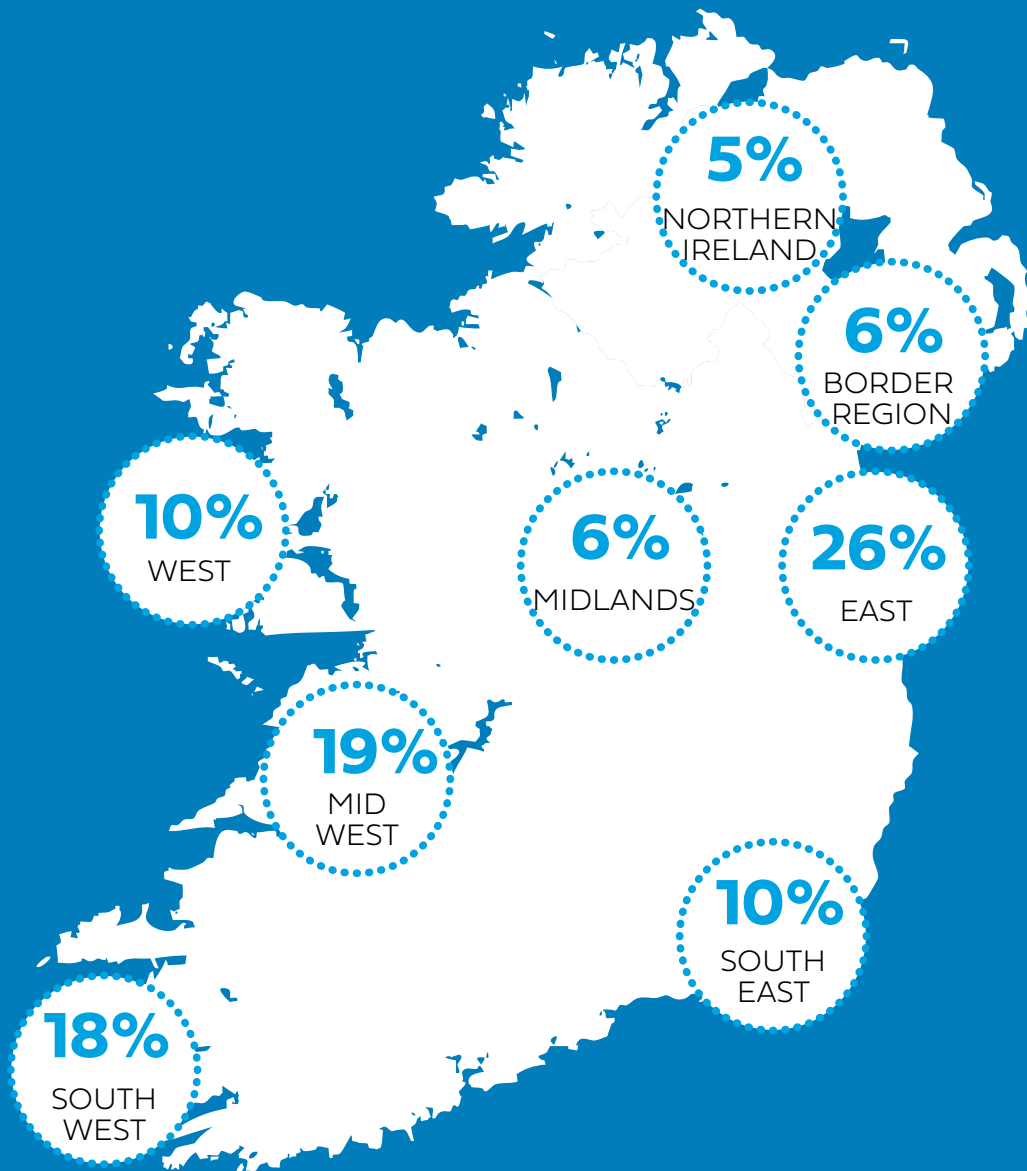

The survey covers various aspects of placement and graduate recruitment, such as:

- Average Salaries
- Disciplines in demand
- Employment by location
- Employment by sector
- Job vacancies
- Recruitment levels
- Work Placement activities
- Recruitment processes
- Top technical and soft skills, ranked by employers
- Recruitment challenges

The Early Careers Employer Survey is a valuable resource for employers, students, and HEI (AHECS) colleagues to understand the placement and graduate recruitment market. We are grateful to everyone who supported and participated in the survey. We encourage you to view the results and trends as part of your ongoing exploration of the placement and graduate recruitment market.

Organisation Type

Small - Medium Enterprises (SME)
Less than 250 employees

**Charitable or
Not-for-profit**

Large Organisations
Over 250 employees

Three hundred and forty employers responded to the survey this year. The distribution of organisation types responding to the survey has become more balanced in 2023, with Small – Medium Enterprise organisations accounting for 45% of the response rate and large organisations for 50%. The remaining 5% of the response rate belongs to charities or not-for-profit organisations.

Sectors Surveyed

The Graduate Market Survey uses NACE, which is also used by the Central Statistics Office (CSO) and the Higher Education Authority (HEA) to ensure the standard classification of economic activity. NACE is an acronym derived from the French title *Nomenclature générale des Activités économiques dans les Communautés européennes*. NACE is the statistical classification of human health and social activities in the EU. For NACE classifications go to [CSO.ie](https://www.cso.ie)

Work Placement

Work Placement is a type of work experience that is part of a degree or a training programme, where students can apply their knowledge and skills in a professional setting related to their field of study.

It involves a three-way partnership between an employer, a student and a Higher Education Institution (HEI), where the student works for a certain period of time, usually between 3-12 months, and may receive academic credit or payment.

Work Placement is offered by 79% of employers surveyed, a 3% increase from last year, and 57% of employers also offer summer internships.

12mths +

Changes in Placement

According to a recent survey, the number of summer internships and work placements offered by employers will not change significantly from previous years. One third of the surveyed organisations plan to increase their intake of interns and placement students, while 7% will reduce their opportunities. The proportion of placement students who are hired as graduates after their work experience remains stable at 40% up 3% from last year.

Q. How do you expect the total number of work placements to change during 2023/24?

Conversion Rates

Graduate Recruitment

The graduate recruitment market is constantly evolving and adapting to employers' and candidates' changing needs and expectations. Some of the current trends that are shaping the graduate recruitment market are:

- The rise of remote work and flexible arrangements offer more opportunities for graduates to work from anywhere and balance their personal and professional lives.
- The increased demand for digital skills and competencies requires graduates to be proficient in using various technologies and platforms and learn new ones quickly.
- The growing importance of diversity and inclusion encourages employers to seek out and hire graduates from different backgrounds, perspectives, and experiences and foster a culture of belonging and respect in the workplace.
- The shift from linear to nonlinear career paths allows graduates to explore different roles and industries and pursue their passions and interests rather than following a predetermined trajectory.

Graduate Vacancies

Location of graduate vacancies

Graduate roles are most prevalent in the East, accounting for 27% of the total. The Midwest comes second with 21%, followed by the Southwest at 18%. 79% of opportunities are based in Ireland with 21% of opportunities available overseas.

Graduate Vacancies and Hiring Environment for 23/24

According to a survey, 92% of respondents expect the level of graduate vacancies to be higher or at a similar level as 2023 with only 8% citing a decrease in graduate levels.

The survey also asked participants to rate the difficulty of filling these open positions and the results showed that most participants expect the hiring environment to become more challenging in the next 12 months. Specifically, 53% of respondents anticipate an increase in the difficulty level, 43% predict no change, and only 4% foresee a decrease. These findings suggest employers may face more competition and challenges in hiring as the demand for talent exceeds the supply.

Diversity and inclusion are essential for creating a positive and productive work environment. They also help organisations attract and retain the best talent from various backgrounds and perspectives. Inclusive recruitment is connecting with, assessing, and selecting diverse individuals when hiring. It requires organisational and individual practices that value diversity and are bias-free. Diversity refers to representing and recognising people with different characteristics, such as age, gender, race, disability, religion, sexual orientation, and socio-economic background. Inclusion goes beyond representation and recognition to valuing these differences and enabling everyone to thrive at work.

One way to measure the effectiveness of inclusive recruitment is to set hiring targets for different groups of candidates. Hiring targets are specific goals or quotas to increase the representation of underrepresented or marginalised groups in the workforce.

However, not all employers use hiring targets as part of their diversity and inclusion strategy. Our study found that while most respondents (92%) see diversity and inclusion as important to their recruitment policy, 78% do not set any hiring targets; for those who do, the significant target is gender.

Do you provide job specs for each new graduate role?

Who Should Apply?

The survey conducted by the University of Limerick collected data from 340 companies across various sectors and regions. The survey aimed to identify the most sought-after disciplines among graduate applicants by employers. The survey results showed that the top 9 disciplines that employers are looking for have remained stable compared to the previous year. The most in demand disciplines are engineering, business, and ICT and electronics, which account for 51%, 40%, and 22% of the total demand respectively. These disciplines reflect the growing needs of the economy in areas such as infrastructure, innovation, and digitalization. 13% of the surveyed employers indicated that they are not restricted to any specific discipline and are willing to consider graduates from any field of study up 2% on last year.

TimeFrame

Average Time Frame

7-8 Weeks

The process of hiring new graduates is designed to be efficient and thorough. It takes about 7-8 weeks from posting the job to making the offer. This may change depending on how many people apply, how complex the role is, and other factors. This process involves several steps, such as screening applications, conducting interviews, assessing candidates' skills and abilities, and checking references.

Application Stage

Application Stage

The survey results show that having a strong CV and cover letter is essential for job seekers, as 88% of the employers who participated in the survey require them at the application stage. The survey also reveals that online applications are a common method, used by 44% of the organisations. Additionally, 57% of the respondents use pre-screening questions to filter out candidates at the application stage.

The results of the 2023 survey on the most common selection methods showed that competency-based interviews are still the dominant technique, with 57% of the organisations surveyed using them. However, the survey also indicated a rise in the use of virtual, telephone and video interviews. These methods were reported by 77%, 42% and 37% of the respondents respectively. Other selection methods used by some organisations include presentations (19%), assessment centres (10%) and strengths-based interviews (28%). The survey also asked about the screening methods that organisations use before or after the interviews. The most prevalent screening method was reference checking (96%), followed by social media checks (16%).

Graduate Salaries

Average Graduate Salaries - Trending Data

The table compares the average starting salaries for graduates with Undergraduate, Postgraduate Master's and PhD degrees. The data indicates that there is a positive relationship between the level of education and the starting salary, although there may be variations depending on the sector, qualification location and other factors.

The average starting salary for Undergraduates is €30,918, which is €1,600 higher than the previous year. For Postgraduate Master's degrees, the average starting salary is €34,167, which is €900 more than the previous year. For PhD graduates, the average starting salary is €35,460, which is €1,500 more than the previous year.

Challenging Disciplines to hire

One of the most difficult tasks for graduate recruiters is to attract candidates from fields that are in high demand and low supply. According to our survey, the top three disciplines that face this challenge are engineering (43%), ICT and electronics (17%), and business (17%). These disciplines require specialized skills and knowledge that are not easily found among the general population.

How much pressure have you been experiencing to increase starting salaries for key target groups?

Have graduates accepted a job offer they later declined in the last 12 months?

Graduate recruitment challenges

Q. Please rank the challenges you face in your graduate recruitment this year

According to a recent survey, the most significant challenge for organisations in hiring graduates is the high level of competition from other employers in the same sector. The second most challenging factor is the limited supply of graduates with specific degree skills/sets that match the organisation's needs. The third most cited issue is the gap between the expectations of graduates and the reality of entry-level positions.

1
Competition for graduate talent from other employers in your sector

2
Number of available graduates from specific degrees/skillsets.

3
Graduates expectations at entry level stage.

4
Competition for graduate talent from other employers outside your sector

5
Graduates accepting offers then withdrawing

6
Work readiness level of graduates.

Onboarding

Q. What are your plans for onboarding new graduate hires?

Contract Type

Q. What type of graduate contract do you offer graduates?

Global Technical Skills

Respondent employers were asked to rank 12 global technical skills, according to the value of those skills to their organisation.

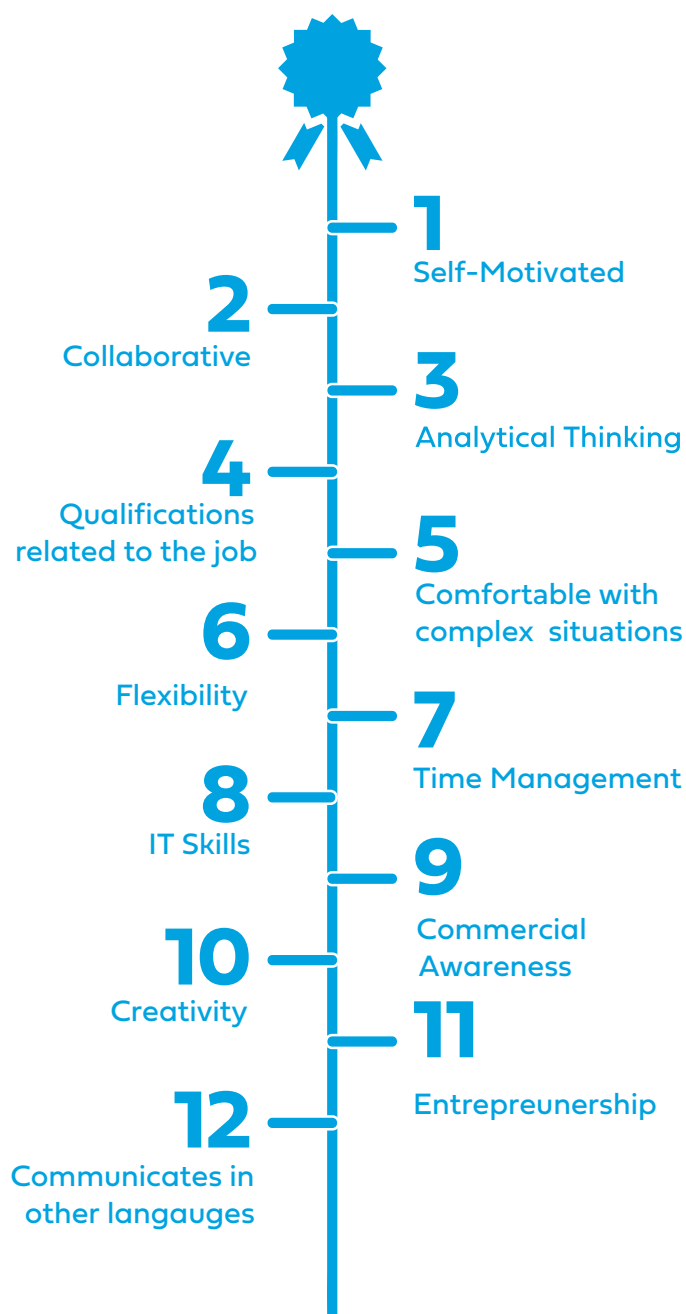

Economic and technological changes are facilitating the internationalisation of business. Many companies, large and small, have international customers/operations and international recruitment patterns. The jobs market for highly skilled graduates is becoming increasingly global.

Top five global technical skills 2022:

1. Self-Motivated
2. Analytical Thinking
3. Collaborative
4. Flexibility
5. Qualifications related to job

Top five global technical skills 2021:

1. Analytical thinking
2. Self-motivated
3. Collaborative
4. Flexibility
5. Comfortable with complex situations

Global Soft Skills

Respondent employers were asked to rank **12 global soft skills**, according to the value of those skills to their organisation.

Organisations are challenging the national expectations of the graduate workforce. As the requirements of employers for their global workforce continue to change, graduates and providers of higher education must adapt to succeed.

Top five global soft skills 2022:

1. Positive attitude and energy
2. Ability to cope with pressure
3. Work ethic
4. Seeks opportunities for continuous learning
5. Reliability

Top five global soft skills 2021:
